Alert You are about to trade on a market that is not simple and may be difficult to understand.

What is this product?

Contract for Differences (“CFDs”) on ETFs

Trading CFDs on ETFs enables investors to have exposure to fluctuations related to the price performance of the underlying ETFs without physically owning it. By trading on CFDs on ETFs, you do not physically own the ETFs, neither take delivery of the ETFs at any point during the duration of the trade. You can buy a CFD on a ETFs (i.e. “go long”) if you believe that the value of the underlying ETFs is going to increase, with the intention to later sell it at a higher value. You can sell a CFD (i.e. “go short”) if you believe that the value of the ETFs is going to decrease, expecting to later buy it back at a lower price. In both circumstances, if the ETFs price moves in the opposite direction and your position is closed, your account would be debited for the loss of the trade (plus any relevant costs), subject to our **Negative Balance Protection**. CFDs on ETFs are not listed instruments and are traded as “Over-The-Counter” contracts between the client and the Company. Investors are required to pay an initial deposit, or margin, upfront when the position is opened. **Trading on margin** can enhance any losses or gains you make. This initial margin requirement will be returned when the position is closed. The maximum **leverage** offered for CFDs on ETFs is 1:5.

Objectives:

The objective of trading CFD is to gain exposure to fluctuations (generally on the short term) related to the underlying ETF without owning it. Your return depends on the size of the performance (or movement) of the underlying ETF and the size of your position. The difference between the buy price and your subsequent sell price would equate to your profit, minus any relevant costs. This product is commonly traded on margin. Margin refers to the use of a small amount of capital to support an investment of a larger exposure. Please note that margin/leverage trading requires extra caution, because whilst you can realize large profits if the price moves in your favor, you risk extensive losses if the price moves against you

The normal required margin for ETF Contract is 20%. This means that in order to open a transaction of €10,000 (deal size) with 20% required margin, the investor will need to have a minimum margin of €2,000 in his account. This represents a leverage of 1:5. Margin requirements may be decreased at the investor’s request, subject to fulfilment of certain criteria whereas margin requirements may be increased at the Company’s discretion in cases of extreme market volatility.

Who is this account most suitable for? Clients who:

- have high-risk tolerance;
- want to generally gain short-term exposures to financial instruments/markets, and have a diversified investment and savings portfolio;
- are trading with money which they can afford to lose;
- have experience with, and are comfortable trading on, financial markets and understand the impact of and risks associated with margin trading.

Who is this account NOT suitable for? Clients who:

- do not want to be subjected to volatile markets;
- want capital protection.

- Depending on your bank, transfers may take a further two (2) days.

What is the risk and what could I get in return?

1 2 3 4 5 6 7

Lower risk

(typically lower rewards)

Higher Risk

(typically higher rewards)

There is no recommended or minimum time period for holding this product. You may be forced due to the volatility of the market to buy or sell your CFDs on ETFs at a price that will significantly impact your invested capital.

The **Summary Risk Indicator ("SRI")** is a guide that shows the level of risk of this product compared to other products and how likely it is that the product will lose money because of movements in the markets, or because we are not able to pay you. We have classified this product as 7 out of 7, which is the highest risk class. This rates the potential losses from future performance at a very high level.

The primary risks from CFD trading are the market risk and counterparty risk; however, there are additional risks that you should be aware of before trading (e.g. leverage risk, margin risk, unregulated market risk, market disruption risk, online trading platform and IT risk, conflicts of interest, currency risk). Poor market conditions are very likely to impact the capacity of the Company to pay you. CFD trading is undertaken on electronic platforms. There

may be times that system or other breakdowns arise which may affect your ability to trade, or our ability to offer continuous prices or create a need for subsequent adjustment of prices to reflect underlying exchange prices.

CFDs on ETFs do not protect you against any adverse future market performance. Spreads may vary, and the underlying market may be subject to high volatility that can generate losses rapidly. CFDs on ETFs are **leveraged products**, requiring only a proportion of the notional value of the contract to be deposited as initial margin. Using leverage, you gain larger exposure to a financial market by tying up only a relatively small amount of your capital. Trading with leverage can magnify both the profits and losses you make in relation to the investment. Statistically, a significant part of clients loses because leverage amplifies losses, leading to margin calls and closures of clients' open positions. In the event of default, your positions may be closed out. You should carefully consider whether trading in leveraged products, such as CFDs, is appropriate for you. For more information on leverage and the Company's Risk Disclosure Policy please click [here](#).

Negative Balance Protection ("NBP")

The Company operates a NBP meaning that you cannot lose more than the Equity of your trading account, however you risk losing the capital invested with us.

Margin close out rule and Minimum Investment

Margin call level (also known as 'Stop-out' level) is a limit set by the CIF which is currently set at 50%. This means that, once your margin level falls below 50%, the CIF will automatically begin closing your positions at the current market price, starting from the most unprofitable, to restore the margin level of your account at a level above 50%. Regarding each new position, its minimum exposure value, the initial deposit percentage and initial margin requirements you may refer [here](#).

Currency risk

You may buy or sell CFDs on ETFs in a currency which differs to the currency that your account is denominated in. The final return you will get depends on the exchange rate between the two currencies (i.e. conversion of profit/loss quoted in the quote currency into the currency in which your account is denominated). This risk is not considered in the SRI displayed above.

Tax Considerations

As a trader, all profits are deemed as taxable income hence you are taxed on profits at your marginal tax rate. The Company does not provide yearly tax statements or any information about tax. For tax matters, please consult your financial adviser or tax consultant.

Performance Scenarios

The scenarios presented below demonstrate how your investment could perform in various market circumstances and should not be considered as exact indicators or recommendations. Any different types of charges that may apply to your account are also excluded from the scenarios. Hence, your account performance (i.e. potential profit or loss) will vary depending on various factors, for example how long you hold your position(s).

CFD on ETFs		ProShares Ultra S&P500
Opening Price	P	102.00 USD
Trade Size	LS	60 units
Margin Percentage	MP	20% (Leverage 1:5)
Margin Requirement	$MR = P \times LS \times MP$	2000 EUR
Notional Value of the trade	$NV = MR / MP$	Profit & Loss calculation: EUR (variable currency)
Account Currency		EUR

Long Performance Scenario	Account Performance	Price Change	Profit/Loss USD	Short Performance Scenario	Account Performance	Price Change	Profit/Loss USD
Favourable	10%	10.2	612.00	Favourable	-10%	10.2	612.00
Moderate	0%	0	-	Moderate	0%	0	-
Unfavourable	-5%	-5.1	-306.00	Unfavourable	5%	-5.1	-306.00
Stress	-10%	-10.2	-612.00	Stress	10%	-10.2	-612.00

Note: The above scenarios do not take into account overnight holding costs or commissions; neither the situation where the CIF may not be able to pay you.

Market developments in the future cannot be accurately predicted. The scenarios shown are only an indication of some of the possible outcomes based on recent returns. Actual returns could be lower.

What happens if the Company is unable to pay out?

If the Company is unable to meet its financial obligations towards its clients, all eligible claimant clients' losses will be covered by the Investor Compensation Fund ("ICF") for the Clients of CIFs. The payment of compensation by the ICF shall not exceed 20.000 EUR in total to each eligible client, irrespective of the number of accounts held, currency and place of offering the investment service. For more information, please [access our Policy](#) and/or [CySEC - ICF section](#).

What are the costs?

ONE-OFF COSTS Charges are accessible here	Spread (entry & exit)	Spread is the difference between the bid and the ask price. Spread cost is realized every time you open / close a trade, it is variable, and its size differs when opening and closing a trade. Prices of CFDs as well as their commercial terms like the spreads may be varied to reflect periods of actual or expected heightened market volatility and reduced liquidity. Given the volatile nature of ETFs, the CIF has the right to change spreads at regular intervals.
	Commission	The fee to be charged at the opening and closing of the transaction.
	Currency Conversion	A currency conversion spread will be charged each time for converting any realized profits, losses and/or other fees that are denominated in a different currency to the currency in which your account is denominated.
ONGOING COSTS charges are accessible here	Swap (open positions' financing cost)	For every night that a position is held open, a fee charge is subtracted from your account. The longer the position is held, the more the costs will accrue (note: if the swap rate is negative, you will make a payment but if the swap rate is positive you will receive payment).
INCIDENTAL COSTS	Deposit, Withdrawal, Transfer, Inactivity and Conversion Fees	The charges specified (incidental costs) are accessible here .

How long should I hold it, and can I take money out early?

CFDs are generally not suitable for long term investments and are intended for short term trading. There is no minimum and/or recommended holding period for CFDs. As such, you can open and close a CFD at any time during market hours. Note that UR Trade Fix Ltd may close your position without asking your prior consent if there is no sufficient margin level in your account. You can request a withdrawal of available funds on your account at any time.

How can I complain?

If you have a complaint, please contact the Compliance Department of the Company by email at complaints@plusmarkets.eu as shown on our Complaints Policy accessible on our website.

If you are not satisfied with our final response to your complaint, then you can contact the [Financial Ombudsman Service \("FOS"\) of the Republic of Cyprus](#).
